Construction board having a number of marks for facilitating the installation thereof and a method for fabricating such construction board

REISSUE: January 11, 2002 - Reissue Application filed Ex. Gp.: 3635; Re. S.N. 10/043,454 (O.G. April 23, 2002)

INVENTOR: Smid, Dennis M., 9 Karen Ct. Wayne, NJ; Palmesino, Richard, 28 Dowling Pkwy. West Paterson, NJ

APPL-NO: 049764 (00)

FILED-DATE: March 27, 1998

GRANTED-DATE: January 11, 2000

LEGAL-REP: Frommer Lawrence & Haug LLP; Smid, Dennis M.

IPC-MAIN-CL: E 04B002#0

PRIM-EXMR: Kent, Christopher T.

CORE TERMS: gypsum board, installation, therebetween, correspond, plywood, color, relatively small, horizontal, fastener, spacing ...

ENGLISH-ABST:

A construction board having a number of marks or lines which facilitate the installation of such board to a number of supports in a building, house or the like. Such lines may have a number of different arrangements. For example, the lines may be arranged as a plurality of substantially horizontal and/or vertical lines which have a predetermined distance or distances therebetween. Such distance or distances may correspond to the standard spacing between supports (such as 16 or 24 inches). Alternatively the spacing between lines may have a relatively small value, such as 1/2 of an inch, 1 inch, 1 1/2 inches, 2 inches or the like. Additionally, adjacent lines may have respective characteristics (such as different colors) so as to easily distinguish between adjacent lines. As a result, a worker may easily install a construction board in a relatively small amount of time and the number of fasteners (nails, screws, or the like) which "miss" a support member may be eliminated or reduced.
